cloud computing is a model of computing where resources are provided as a service over the internet. This model allows for the use of shared pools of configurable system resources, such as servers, storage, and applications, that can be rapidly provisioned and released with minimal management effort. It is often used to provide data hosted in the cloud.

Cloud computing is a model of computing.

Cloud computing is a model of computing that allows for the use of shared pools of configurable system resources, such as servers, storage, and applications, that can be rapidly provisioned and released with minimal management effort.

> Cloud computing is a model of computing.

Cloud computing is a model of computing that allows for the use of shared pools of configurable system resources, such as servers, storage, and applications, that can be rapidly provisioned and released with minimal management effort. Microsoft Azure — a cloud computing platform that allows for the use of shared pools of configurable system resources, such as servers, storage, and applications, that can be rapidly provisioned and released with minimal management effort. Cloud computing is a model of computing that allows for the use of shared pools of configurable system resources, such as servers, storage, and applications, that can be rapidly provisioned and released with minimal management effort.

> Cloud computing is a model of computing.

Cloud computing is a model of computing that allows for the use of shared pools of configurable system resources, such as servers, storage, and applications, that can be rapidly provisioned and released with minimal management effort.

e software application over the internet, typically with a web browser.

■ Serverless

Serverless computing is a cloud computing execution model that provides a platform to build and run applications without having to manage servers. Developers can write code and set up triggers that define when and how code should run. The cloud provider handles the allocation of the underlying servers and the scaling of application resources.

e-Serverless computing is a cloud computing execution model, that provides a platform to build and run applications without having to manage servers.

Serverless computing is a cloud computing execution model.

■ Serverless computing is a cloud computing execution model.

Serverless computing is a cloud computing execution model that provides a platform to build and run applications without having to manage servers.
